

CHÂTEAU GOURRAN

Dear subscriber, by this service we keep you informed of the process of wine making, trade, hall of fame of our wines and much more. Our homepage will be updated at the same time.

Replanting, terrain correction and draining

Most of the wine plants at plot numbers 212/213/215 were more than 40 years old and the yield became too low. All plants and structures has been pulled out and burned in order to avoid plant deceases. The 14 km of wire has been brought for remelting. We have taken the opportunity to correct the surface level by some meters in order to facilitate the maneuvering of our vehicles. There are two sources in the field that will be drained. We replant with one year old Cabernet Sauvignon's, they will provide a yield from 2013.

Rent Château Gourran one week for 12 persons

It is possible for you to rent the main house, with pool and terraces through our sister company SARL Loisir Gourran. We have some good weeks available in 2011 and 2012. See link at right.

Best regards

SCEA VIGNOBLE GOURRAN

Replanting

Every time we replant we have an opportunity to make major changes to the field. We can change the variety of grape, orientation of lines, the density of plants, the maneuvering space, drain and much more.

The new plants are allowed to be watered in their growing period, but as soon as the plants are in production watering is not allowed.

The plants lives fine without the supporting wires the first year. They will be installed next year.
